Bid Bulletin No 2
4200797381b Supply and delivery of Household Appliances

Q. The contract terms specify that the product should have an "A" energy class. However, based on the current product catalog on refrigerators with these dimensions, the energy class typically ranges from "E" to "F," which translates to an annual consumption of approximately 200 - 230 kWh.

Could you please confirm if it is possible to change this requirement accordingly

A. As the energy classes have been reclassified, the "A" energy class is incorrect. We accept energy classes E and F. The relevant addendum has been published.
